🐾 PawPal+

Welcome to the PawPal+ starter app.

This file is intentionally thin. It gives you a working Streamlit app so you can start quickly, but **it does not implement the project logic**. Your job is to design the system and build it.

Use this app as your interactive demo once your backend classes/functions exist.

Scenario

PawPal+ is a pet care planning assistant. It helps a pet owner plan care tasks for their pet(s) based on constraints like time, priority, and preferences.

You will design and implement the scheduling logic and connect it to this Streamlit UI.

What you need to build

At minimum, your system should:

- Represent pet care tasks (what needs to happen, how long it takes, priority)
- Represent the pet and the owner (basic info and preferences)
- Build a plan/schedule for a day that chooses and orders tasks based on constraints
- Explain the plan (why each task was chosen and when it happens)

Quick Demo Inputs (UI only)

Owner name

Jordan

Add a Pet

Submit this form to call Owner.add_pet(...) and persist pets for this owner.

Pet name

Mochi 222

Species

dog

Pet age

2

Add pet

Current pets:

	name	species	age	tasks
0	Mochi	dog	2	1
1	Mochi 222	dog	2	1

Schedule a Task

Submit this form to create a Task and call Schedule.add_task(...).

Assign to pet

Mochi 222

Task title

Morning walk

Task time

09:00

Instructions

Walk for 20 minutes

Frequency

daily

Schedule task

Build Schedule

This now renders data directly from your Schedule object.

Generate schedule

Total Tasks	Completed	Pending
2	0	2

Showing tasks in chronological order.

Today's Schedule

	time	task	pet	owner	frequency	status
0	09:00	Morning walk	Mochi	Jordan	daily	pending
1	09:00	Morning walk	Mochi 222	Jordan	daily	pending

Filter by pet

All pets

Filter by status

all

	time	task	pet	owner	frequency	status
0	09:00	Morning walk	Mochi	Jordan	daily	pending
1	09:00	Morning walk	Mochi 222	Jordan	daily	pending

2 task(s) match your current filters.

Scheduling warning: 1 conflict(s) detected.

Review conflicts and quick fix tips

1. CONFLICT (TIME OVERLAP): Jordan's Mochi and Jordan's Mochi 222 both have tasks at 09:00 - 'Morning walk' and 'Morning walk'

Try moving one of the overlapping tasks by 15-30 minutes to avoid missed care steps.
